CC prostate (STEAP)-2 protein. STEAP is a membrane epithelial antigen of the contraremembrane antigens. STEAP is a member of cell surface serpentine transmembrane antigens. STEAP-2 gene is located on chromosome 7q21 and is compared the therapy. Inhibiting the development or progression of a comparison prostate, colon, bladder, lung, ovarian and pancreatic) compressing STEAP or inhibiting growth or killing cells expressing STEAP or comprises administering a vaccine composition to the patient. Treating a patient with a cancer that expresses STEAP, or comprises the variable domains of the heavy and light comprises the variable domains of the heavy and light comprises the variable domains of the heavy and light comprises the variable domains of the heavy and light comprises the single chain monoclonal comprises the single chain monoclonal antibody that the vector delivers the single chain monoclonal antibody coding sequence to the cancer cells and the encoded single chain monoclonal complete the single chain monoclonal antibody is expressed intracellularly. Note: This sequence is stated to listing of the specification. However both the sequences differ at coveral positions

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Six-Transmembrane
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               entry
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ይ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Protein of Prostate
```

New polynucleotide for the diagnosis, prevention and treatment for prostate and testis disorders, particularly prostate cancer, comprises prostate-specific or testis-specific nucleic acids.

Claim 1; Fig 4H; 114pp; English

The invention relates to substantially pure prostate-specific or testiscoling controlling them. Also included CC specific polypeptides and the nucleic acids encoding them. Also included CC are vectors and host cells expressing the proteins, a transgenic animal cexpressing the protein, antibodies against the proteins, probes for CC expressing the nucleic acids, antisense molecules for the nucleic acids and methods of isolating modulators of the proteins. Compounds that CC modulate the proteint especific or testis specific polypeptide are useful to diagnose, prevent or treat disorders of the testis or prostate CC particularly prostate cancer, beaign prostatic hyperplasia, acute CC prostatitis, testicular cancer, cryptorchidism, undescended, retractile, CC ascending or vanished testis. Other proliferative disorders for which the CC cancer, breast cancer, pancreatic cancer, liver cancer and lung cancer. CC The present sequence is prostate specific protein, Six-Transmembrane CC protein of Prostate 1, STMP1, ORF2

The prostate cancer-associated polynucleotide sequences are differentially expressed in prostate tumour tissue or in prostate cancer and are derived from the tissues of various organisms such as humans or other mammals (e.g. mice, sheep and dogs). The methods of the invention are useful for diagnosing and treating prostate cancer in mammals. The prostate cancer-associated genes are useful for diagnosing or treating prostate cancer, as well as for identifying modulators of prostate cancer or agents that inhibit prostate cancer. The nucleic acid sequences are particularly useful in gene therapy, as a vaccine or in antisense applications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 454 AA;

```
The invention relates to an isolated tumour-associated antigenic target CC polypueptide (TAT) (I), specifically TAT138 polypeptides, and the CC polypueleotides (II) encoding them. (II) is useful for diagnosing the CC presence of a tumour in a mammal, where the level of expression of (II) is indicative on the presence of tumour in the mammal from which the test cample was obtained. Antibody to (I) is useful for killing a cancer cell, a colorectal cancer cell, a lung cancer cell, a colorectal cancer cell, a lung cancer cell, a liver cancer cell, a central nervous system (CNS) cancer cell, a colorectal cancer cell, a pancreatic cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a colorectal cancer cell, a cancer cell, a cancer cell, a cancer cell, a colorectal cancer cell, a cancer cell, a cancer cell, a cancer cell, a cancer cell, a cancer cell, a cancer cell, a cancer cell, a cancer cell, a cancer cell, a cancer cell, a cancer cell, a cancer cell, a cancer cell, a cancer cell, a cancer cell, a cancer cell, a cancer cell, a cancer cell, a cancer cell, a cancer cell, 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       24-AUG-2000; 2000WO-US023328.

The antibodies are also useful for treating a TAT-expressing cancer or alleviating one or more symptoms of cancer in a mammal. The present sequence represents the amino acid sequence of TAT138
                                                                                                                                                                                                                                                                        Human PUMPCn protein, PRO23203.

CC The invention relates to an isolated human protein upregulated in CC identical to prostate cancer (PUMPCH) PRO23203 polypoptide, a sequence 80% CC identical to PRO23203 and the sequence as encoded by CDNA insert of the CC vector deposited as ATCC Deposit No. PTA-2513 (DNA185171-2994) on C2 26/9/2000. Also included are the polymucleotide by CDNA insert of the C2 DNA sequence 80% identical to the polymucleotide and one that C2 DNA185171-2913 (DNA185171-2994) on C2 DNA185171-2913 (DNA185171-2994), a host cell comprising the vector, C2 preparation of PRO23203, a chimeric molecule comprising the vector, C3 preparation of PRO23203, a chimeric molecule comprising PRO23203 fixed to C3 Activation and in a mammal by: (a) contacting a microarray diagnostic with a C3 DNA185171-2994 probe, detecting and diagnosing the presence of prostate C4 cancer in a mammal by: (a) contacting a microarray diagnostic with a C4 contacting a tissue of the mammal with an anti-PRO23203 antibody and C4 contacting a tissue of the mammal with an anti-PRO23203 antibody and C5 contacting a tissue of the presence of prostate cancer in the mammal with an anti-PRO23203 antibody and C5 contacting a tissue of the presence of prostate cancer in the mammal with an anti-PRO23203 antibody and C6 contacting a tissue of the presence of prostate cancer in the mammal cancer in the mammal with an anti-PRO23203 and prostate cancer in the mammal with an anti-PRO23203 and prostate cancer in the mammal cancer in the section of contacting either transgenic animals or knock out animals which in turn cancer in the prostate cancer in the presence of prostate cancer in the presence of prostate cancer in an mammal and screening of therapeutically useful cancer that mammal and for chromosome identification. C6 pro23203 may also be employed as a therapeutic agents and for servening cancer in the effect of the PRO23203 polypoptide consensing the present the effect of the PRO23203 polypoptides. The present call culture or natural sources. The present confidence is the pre

The invention discloses human nucleic acids encoding tumour-associated antigenic target (TAT) polypeptides, with our without their associated signal peptide. Also disclosed is an antibody that specifically binds the TAT polypeptides, a method for detecting the presence of a tumour is a mammal and a method for killing a cancer cell expressing the TAT polypeptide. The nucleotide sequences are useful in preparing TAT polypeptides by recombinant techniques and in gene therapy (e.g. for replacement of defective gene). The TAT polypeptides by recombinant techniques and in gene therapy therapeutic agents and for detecting the presence, prevention and/or therapeutic agents and for detecting the presence, prevention and/or treatment of a tumour, such as colon, breast or prostate tumour. The TA polypeptides and nucleic acids may also be used diagnostically for ties

New polynucleotides and polypeptides, useful for developing a diagnomarker or medicines for regulation of their expression and activity, as targets of gene therapy.

The invention discloses a polynucleotide comprising a sequence selected CC from 1970 fully defined nucleotide sequences which encode novel collined; as a polypeptide encoded by the polynucleotide cor its partial peptide, an antibody binding to the polypeptide or peptide or its partial peptide, an antibody binding to the polypeptide or peptide of the polynucleotide by contacting the polypeptide or peptide of the polynucleotide by contacting the polypeptide or peptide or peptide of the polynucleotide by contacting the polypeptide or peptide with the antibody of the encoded protein, and observing the binding CC between the two, a transformant carrying the polynucleotide in an expressible manner and an antisense polynucleotide. The oligonucleotide concerns are useful as a primer for synthesising the polynucleotide, or as a probe for detecting the polynucleotide. The polynucleotide and encoded concerns are useful as pharmaceutical agents and many disease-related concerns are useful as proteins, for developing a diagnostic marker or medicines for regulation of their expression and activity, or as targets of genes therapy. The genes are involved in tissue and/or cell cranscription-related proteins, disease-related proteins, curvanscription-related proteins, disease-related proteins and genes cancer, tumours. The colM may be used to regulate the activity or expression of the encoded protein to treat diseases. The sequence presented is a protein of the invention. Note: Some of the sequence data for this patent is not represented in the printed by the European Patent Office.

                                                                                                                                                                                                                                                                                                                             The invention relates to six-transmembrane epithelial antigen of the prostate related protein (STEAPRP) and its corresponding nucleic acid. STEAPRP DNA is used to diagnose and to treat prostate call proliferative disorders, particularly prostate hyperplasia and prostate cancer, and for screening a library of molecules of compounds for specific binding affinity. It is also used in gene therapy. STEAPRP is used to screen a subject sample for antibodies, which specifically binds the protein, and to prepare and purify a protein. The present sequence is human STEAPRP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New six-transmembrane epithelial antigen of the prostate-related protein and nucleic acids, useful for diagnosing and treating prostate cell proliferative disorders, particularly prostate hyperplasia and prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; STEAPRP; proliferative disorde six-transmembrane epithelial antigen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human STEAPRP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAE28951

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S
The invention relates to a purified human protein comprising a copypeptide having a fully defined transmembrane protein differentially compressed in prostate and lung tumour (TMPL) sequence. The protein is cuseful for detecting expression of the protein in a sample, where the comparison is a sample is lung or prostate tissue sample and the protein is diagnostic of a lung or prostate cancer. The protein is useful to identify an compared with a standard and is diagnostic of a lung or prostate cancer. The protein. The protein is useful for screening several molecules and compounds to identify at least one compared. The protein is useful for protein is useful for protein and purifying a complete of the protein and purifying a copyclonal antibody and for preparing a monoclonal antibody using completed to detect expression of the protein in a lung or prostate cancer. A TMPL specific antibody is useful to detect expression of the protein in a lung or prostate cancer. A TMPL specific antibody is a diagnostic for lung or corostate cancer. A TMPL specific antibody is a diagnostic for lung or protein is useful for diagnosting a prostate cancer and for compounds to incomparifying a protein, for treating a prostate cancer and for the protein is useful for diagnosing, staging, treating or monitoring compounds to the protein is useful for cancer, preferably lung or prostate cancer. The present sequence represents the amino acid sequence of the human constants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          22-MAY-1998; 98US-00083521.

The invention relates to substantially pure prostate-specific or testiscolor specific polypeptides and the nucleic acids encoding them. Also included are vectors and host cells expressing the proteins, a transgenic animal captures of the protein, antibodies against the proteins, pubbes for the nucleic acids, antisense molecules for the nucleic acids and methods of isolating modulators of the proteins. Compounds that the modulate the proteins or testis specific polypeptide are useful to diagnose, prevent or treat disorders of the testis or prostate compounds that the proteins proteins or prostate compounds that the proteins of the testis or prostate compounds that the proteins of the testis or prostate compounds that the proteins of prostate that the compounds that the protein of prostate cancer, benign proteinic paypeptide are useful compounds that the protein testis or prostate the protein of prostate the protein of protein of the testis or prostate cancer, cancer, interactive disorders for which the conditators may be used include lymphoma, leukaemia, melanoma, ovarian compounds that the protein sequence represents a prostate specific protein, Six-

Transmembrane Protein of Prostate 1, STM;1
                                                                                                                                                                                                                                                                                                                                                                                                                              New polymucleotide for the diagnosis, prevention and prostate and testis disorders, particularly prostate prostate-specific or testis-specific nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                    Claim 1; Fig 4B; 114pp; English.

                                                                                                                                                                                                                                       The invention relates to substantially pure prostate-specific or testiscolors specific polypeptides and the nucleic acids encoding them. Also included are vectors and host cells expressing the proteins, a transgenic animal expressing the protein, antibodies against the proteins, brobes for detecting the nucleic acids, antisense molecules for the nucleic acids and methods of isolating modulators of the proteins. Compounds that conducte the proteins protein that the protein that the protein that the protein the protein compounds that the dispose, prevent or treat disorders of the testis or prostate are useful to diagnose, prevent or treat disorders of the testis or prostate C particularly prostate cancer, benign prostatic hyperplasia, acute constitis, testicular cancer, captorchidism, undescended, retractile, ascending or vanished testis. Other proliferative disorders for which the cancer breast cancer, pancreatic cancer, leukaemia, melanoma, ovarian cancer, breast cancer, pancreatic cancer, leukaemia, melanoma, ovarian cancer, breast cancer, pancreatic cancer, leukaemia, melanoma, ovarian cancer, breast cancer, pancreatic sepecific protein, Six-Transmembrane concerned the prosent sequence is prostate specific protein, Six-Transmembrane concerned the protein of Prostate 1, STM;1, ORF3
                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                문
sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also use in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II) is useful for generating antibodies against it, detecting or quantitating useful for generating antibodies against it, detecting or quantitating polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorder, involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Homo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; chromosome mapping; gene mapping; gene therapy; forensic food supplement; medical imaging; diagnostic; genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ABG12306 standard; protein; 576

Sequence 1273 AA;

```
CC sequences. (I) is useful as hybridisation probes, polymerase chain (CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping, CC and in recombinant production of (II). The polymucleotides are also used CC in diagnostics as expressed sequence tags for identifying expressed CC genes. (I) is useful in gene therapy techniques to restore normal CC activity of (II) or to treat disease states involving (II). (II) is CC useful for generating antibodies against it, detecting or quantitating a CC polypeptide in tissue, as molecular weight markers and as a food CC supplement. (II) and its binding partners are useful in medical imaging CC of sites expressing (II). (I) and (II) are useful for treating disorders CC involving aberrant protein expression or biological activity. The CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity Cresponsible for genetic disorders or other traits to assess biodiversity C and to produce other types of data and products dependent on DNA and CC amino acid sequences . ABG00010-ABG30377 represent novel human diagnostic C matern did not appear in the printed specification, but was obtained in CC electronic format directly from WIPO at CC ftp.wipo.int/pub/published_pct_sequences

                                                The present sequence is an alternative version of human six transmembrane epithelial antigen of the prostate (STEAP) 2 protein. STEAP is a member of cell surface serpentine transmembrane antigens. STEAP agene is concerned on chromosome 7021 and is used in gene therapy. Inhibiting the development or progression of a cancer (eg. prostate, colon, bladder, lung, ovarian and pancreatic) expressing STEAP or inhibiting a vaccine composition to the patient. Treating a patient with a cancer that expresses STEAP, or inhibiting growth or killing cells expressing STEAP in a patient with a cancer that expresses STEAP, or inhibiting growth or killing cells expressing STEAP, comprises administering a comprises administering to the patient. Treating a patient with a cancer that expresses STEAP, or inhibiting growth or killing cells expressing STEAP, comprises administering to the patient a vector encoding single chain monoclonal antibody that comprises the variable domains of the heavy and light chains of the monoclonal antibody that specifically binds to STEAP, comprises the cancer cells and the encoded single chain monoclonal squence to the cancer cells and the encoded single chain monoclonal comprises that being shown as SEQ ID No.8 (AAE02781) in figure 9A-9C of the specification. However the present sequence lacks several amino caids at its N-terminal end and has additional amino acids at its C-terminal end when compared with the sequence shown in figure 9A-9C acids at its N-terminal end with the sequence shown in figure 9A-9C terminal end when compared with the sequence shown in figure 9A-9C compared with the sequence shown in figure 9A-9C compared with the sequence shown in figure 9A-9C compared with the sequence shown in figure 9A-9C compared with the sequence shown in figure 9A-9C compared with the sequence shown in figure 9A-9C compared with the sequence lacks at its C-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; cytostatic; antiproliferative; vaccine; gene therapy; six transmembrane epithelial antigen of the prostate-2; STEAP-2; chromosome 7g21; cancer; prostate; colon; bladder; lung; ovarian
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Misc-difference

(I) (II) and (III) are useful for diagnostic evaluation of disorders.

(I) is useful for gene therapy of diseases and (II) can be used for therapeutic treatment. Diseases that may be treated include wound healing and tissue repair, burns, central nervous system disorders (e.g. Alzheimer's, Parkinson's, Huntington's and amylotrophic lateral sclerosis), immune deficiencies, cancer, autoimmune disorders, multiple sclerosis, diabetes and allergies. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
